Petition to Make Special

Commissioner for Patents

Washington, District of Columbia 20231

Sir:

Applicant hereby respectfully petitions that the above application be made special under MPEP Sec. 708.02 for the following reason; attached is a declaration in support thereof:

- | | |
|---|--|
| I. <input type="checkbox"/> Manufacturer Available;* | VII. <input type="checkbox"/> Recombinant DNA Is Involved;* |
| II. <input type="checkbox"/> Infringement Exists;* | VIII. <input type="checkbox"/> Special Procedure: Search Was Made;* |
| III. <input type="checkbox"/> Applicant's Health Is Poor; | IX. <input checked="" type="checkbox"/> Superconductivity Is Advanced; |
| IV. <input type="checkbox"/> Applicant's Age Is 65 or Greater; | X. <input type="checkbox"/> Relates to HIV/AIDS or Cancer;* |
| V. <input type="checkbox"/> Environmental Quality Will Be Enhanced; | XI. <input type="checkbox"/> Counters Terrorism.* |
| VI. <input type="checkbox"/> Energy Savings Will Result; | |

* ☐ Also attached, since reason I, II, VII, VIII, X or XI has been checked, is the \$_____ Petition Fee pursuant to Rules 102 and 17(i).

Very respectfully,

Applicant(s): Boris Volfson

Attachment(s): Fee if indicated and supporting Declaration

Applicant(s): _____

Appn. Number _____

Appn. Title: METHOD AND DEVICE FOR VALIDATION OF THE
ELECTROMAGNETICALLY-GENERATED PROPULSION
AND DEFENSIVE MEASURES

Filing Date: August 4, 2003

Applicant(s): Volfson, Boris

Examiner: _____

Mailed on: 2003 August 4

At: Wabash, IN Post Office

Declaration in Support of Accompanying Petition to Make Special.

Reason IX – Superconductivity is Advanced

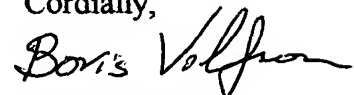

In support of accompanying petition to make special, applicant declares as follows:

1. I am the applicant in the above-identified patent application.
2. The invention of the above patent application will advance superconductivity by offering at least one and possibly many more applications for the superconductor materials.
3. The core of the invention of the above application is a 3D shield executed as a superconductive hollow capsule. Only a superconductor material such as $\text{YBa}_2\text{Cu}_3\text{O}_{7-y}$ cooled to a temperature of about 40 degrees K, or the like cooled superconductor with the composite crystal structure, when subjected to high frequency magnetic fields, generates quantized electromagnetic turbulence required to create a gravitomagnetic force. This gravitomagnetic force is needed to create the exotic quantized processes in the vacuum's subatomic particles that could conceivably

result in a local anomaly in spacetime curvature, pressure of inflationary vacuum state, as well as other local defects. The object of this invention is to validate the electromagnetically-generated propulsion provided by the uneven distribution of pressure of inflationary vacuum state and the associated gravity imbalance within this spacetime curvature anomaly. The positive validation outcome would open doors to interstellar travel. Another object of this invention is to validate the electromagnetically-generated defensive measures. The device for such validation, or a test vehicle, is the new exciting application for a superconductor. If the results of the verification stage of the method of the current invention come out positive, numerous new applications for the superconductor materials would become possible as a shell of a spacecraft, aircraft, military craft, etc.

4. I further declare that all statements made herein of my own knowledge are true and that all statements made upon information and belief are believed to be true, and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application and any patents issuing therefrom.

Cordially,

Boris Volfson
